

American Innovations (AI) is committed to continuously improving our PCS software through feature enhancements and upgrades. The updates included in the 2.6 release of PCS are described below. For details about improvements made in previous releases, including special upgrade instructions due to a specific release, refer to the [PCS Release History](#), available in the *Downloads* section of *PCS Support Site*.

PCS 2.6 supports the following SQL server versions:

Supported	Not Supported
SQL Server 2022	SQL Server 2014
SQL Server 2019	Any SQL server version older than 2014
SQL Server 2017	
SQL Server 2016	

Major Enhancements

Improvements and Miscellaneous Updates

Various updates and fixes, including:

- Added support for SQL 2022
- Resolved an issue where DVM Calibration Date was intermittently NULL
- Removed the requirement for DVM to be connected when transferring Survey Settings to PCS
- Resolved an issue where duplicate records were created when surveys were imported from multiple time zones
- Updated the application to prevent FDC survey file naming issues caused by special characters
- Updated FDC Send user interface to improve the default customer experience. Defaults have been updated to better match the underlying workflow, and user input values now persist when navigating to different screens
- Improved SD card support
- Expanded showcase fields from three to five
- Resolved an issue that could cause Amperage Readings not to filter properly in Exception Reports

- Fixed an issue that caused the Survey Complete dashboard not to return correct values when filtered by date
- Resolved an issue where links to embedded documents could be broken after updating their descriptions
- Resolved an intermittent issue where CI survey readings were scrambled after using the [Rubber Band](#) feature
- Improved Bullhorn API to support more than 2,100 mappings
- Various bug fixes and improvements
